

edge finishing ribbed stair nosing profile

When building a staircase we are often faced with the problem of safeguarding the edge of steps which is the most vulnerable area and more subject to wear and tear. **FOLOSTAIR** edge profile can cover up damage after the laying, protect as well as replenish the decorative tone of the staircase because it blends well with most covering materials. For the application of the profile we recommend the use of our special adhesive or of suitable screws and dowels. Illustrated scale dimension 1:1

folostair™ AE

FOLOSTAIR AE-OLN Polished Brass

Stair nosing profile to apply to finished floors, anti-slip ribbed top surface for safety. To cover and refurbish step edges of staircase. Suitable for intense pedestrian transit.
